ABOUT ME

I'm a recent Computer Science graduate passionate about software development and AI, with experience in full-stack applications, client-server systems, and system programming. I've been actively exploring agent-based AI using tools like LangChain and LangGraph , focusing on automation and intelligent decision-making. Eager to contribute to innovative projects in a dynamic, forward-thinking team.

KEY STRENGTH

- Programming:** Java, C, C++, Python, SQL
- Frameworks & Libraries:** JavaFX, NumPy, Pandas, FastAPI, PostgreSQL, MySQL, Mongo Atlas
- AI/LLM Tools:** LangChain, LangGraph, Windsurf, Cursor
- Web Development:** JavaScript (React) Next.js, HTML, CSS, Node.js,
- DevOps & Tools:** Git, Grafana, Jenkins, Kafka, Jira, Elasticsearch, Linux, Docker, ArgoCD
- Soft Skills:** Problem-solving, documentation, independent execution, process improvement

EDUCATION

- B.Sc Computer Science**
Open University of Israel | 2021 – 2025
GPA - 86 | Relevant courses: Data Structures - (92), Java (91), Advanced Java (93) , OOP (95), Operating Systems (94) Database (98), System Programming in C (95), Computer Networks (98)
- High school**
Computer Science, Physics

WORK EXPERIENCE

- NOC ENGINEER - STUDENT**
Jul 2023 - Present
AccessFintech | Tel-Aviv
 - Monitored and maintained cloud services (AWS) and microservices using **Grafana** and **Elasticsearch** .
 - Deployed and managed services via **Jenkins** and **ArgoCD** , ensuring seamless CI/CD pipeline operation.
 - Handled message queues (**Kafka** , **RabbitMQ**) to optimize communication between distributed components.
 - Performed first-line troubleshooting for network and system issues, providing timely resolution or escalation.
 - Offered technical support and training to internal teams and clients.

PROJECTS

- NOC Alerts Grafana Management System - React / Python (In Production)**
Developed a real-time alert monitoring tool used by 6 NOC engineers daily:
 - Built with **React**, **FastAPI**, and **WebSockets** for live updates.
 - Integrated with Grafana via webhooks for incident tracking.
 - Reduced incident response times through structured alerts, filters, and collaboration features.
- Portfolio - React**  **LIVE**
Developed a responsive and modern personal portfolio website. Leveraged React for dynamic UI components, Next.js for server-side rendering and routing, and Tailwind CSS for a sleek, custom design. Deployed the site using Vercel, ensuring optimal performance and scalability.
- Client-Server Application for Secure File Transfer - C++ / Python** 
Developed a robust client-server system using C++ for the client and Python for the server, enabling secure file transfer and storage. The server-side application employs a MySQL Lite database for managing and storing incoming files from multiple clients. It effectively handles simultaneous client requests through multithreading, ensuring efficient and concurrent processing. To guarantee data security during transmission, implemented RSA encryption for file transfer, safeguarding file integrity and confidentiality throughout the process.
- AI Agent - Based System Exploration – Personal Project**
Experimenting with **LangChain** and **LangGraph** to design autonomous agents capable of planning, reasoning, and executing tasks. Focused on prompt engineering, memory management, and integrating external tools to simulate real-world automation scenarios.
- Deep Learning NLP Project: Analysing Federal Reserve Speeches - Python/ Jupyter Notebook** 
Analysed Federal Reserve speeches using NLP and machine learning techniques:
 - Fine-tuned a pre-trained RoBERTa model to predict sentiment in statements.
 - Utilized FinBERT for financial sentiment analysis, showcasing ability to leverage cutting-edge NLP techniques for domain-specific tasks.
